

DURA SENS SOFT

Durasens Soft protects the table and the environment.

Sizes:

60 cm × 50 cm
70 cm × 50 cm
60 cm × 60 cm
90 cm × 60 cm
120 cm × 60 cm

Thickness:

1,8 mm

Colour:

transparent

Material:

[PET] polyethylene terephthalate,
[PUR] polyurethane

Surface: smooth

Bottom: VAB®-antiglide layer

Optimizing instead of renewing

If the table is no longer spotless, Durasens Soft can make it shine again – in line with the motto „optimise instead of renew.“ On new, very high-quality surfaces, the environmentally friendly PET desk pad offers optimum protection against dirt and liquids.

It is characterized by very high impact and break resistance and has a smooth, transparent surface.

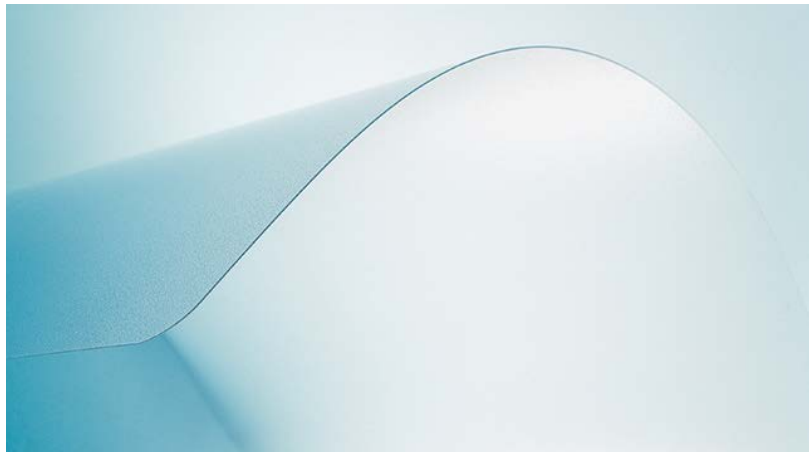

Durasens Soft is above-average robust and durable, at the same time very temperature-resistant (–40 °C to +65 °C).

The high-performance, thermally welded VAB®-antiglide layer ensures that there is no slippage of the mat on the table. Durasens Soft has the properties of high dimensional stability and abrasion resistance as well as low sliding resistance.

Durasens Soft is characterized by its ecological properties: environmentally friendly in production, reusable as often as desired. Fully recyclable, this table mat helps to protect important components of our time: the environment and valuable resources.

Complementing the ecological aspect, Durasens Soft offers many other positive properties. It is odorless and free of harmful plasticizers, such as e.g. bisphenol A. In addition to first-class chemical resistance to acids, various solvents, alcohols, salts and plasticizers, it is also resistant to oils, greases and fuels.

DURA SENS SOFT

VAB®-antiglide layer

Abstract

- protects the table, the environment and resources
- very high impact and break resistance
- free from harmful plasticisers (e.g. bisphenol A)
- smooth surface
- resistant to chemical agents, oils and greases
- high dimensional stability and abrasion resistance
- low sliding resistance
